

I know that  $\frac{3}{8}$  is less than  $\frac{1}{2}$  because its bar is less than half shaded.

$\frac{3}{8}$  is less than  $\frac{1}{2}$

You can do it a different way by seeing that the top number 3 is less than half the bottom number 8.

Write < or write = or write > between each pair of fractions.

<p><b>1.</b></p> $\frac{5}{12} \quad \frac{1}{2}$	<p><b>2.</b></p> $\frac{5}{8} \quad \frac{1}{2}$	<p><b>3.</b></p> $\frac{1}{2} \quad \frac{6}{10}$
<p><b>4.</b></p> $\frac{1}{2} \quad \frac{3}{4}$	<p><b>5.</b></p> $\frac{3}{6} \quad \frac{1}{2}$	<p><b>6.</b></p> $\frac{2}{5} \quad \frac{1}{2}$
<p><b>7.</b></p> $\frac{4}{7} \quad \frac{1}{2}$	<p><b>8.</b></p> $\frac{1}{2} \quad \frac{1}{3}$	<p><b>9.</b></p> $\frac{1}{2} \quad \frac{4}{10}$

**Challenge:**

Amado took  $\frac{1}{2}$  of a pizza. He gave  $\frac{1}{2}$  of what he had to Shanna. Then Shanna gave  $\frac{1}{2}$  of what she had to Palesa. What fraction of a whole pizza did Palesa have? \_\_\_\_
